Strasbourg, France

epsylene.dev

SUMMARY

Computational physics and graphics engineering graduate, with a specialization in high-performance computing and GPU programming. Passionate about leveraging parallel programming and CPU/GPU architecture knowledge to tackle computationally intensive scientific and engineering challenges.

SKILLS

Languages: C++, Rust, Python, C, Fortran, JavaScript, HTML, x86-64 asm, $\LaTeX$

Technologies: Linux, Git, CMake, OpenGL, OpenMP, Vulkan, CUDA, SYCL

PROJECTS (see all)

Raytracing, C++	Ilya A basic raytracer. Currently implements different types of materials, importance sampling and a basic BVH tree. github.com/Epsylene/Ilya
OpenGL, C++	minigl A small OpenGL 3D graphics library. github.com/Epsylene/minigl
x86 asm, C++	axolotl-os OS project, written in x86 assembly and C++. Currently consisting of a custom long-mode bootloader and the kernel it boots to. github.com/Epsylene/axolotl-os
Vulkan, Rust	caliban An experimental Vulkan renderer written in Rust. github.com/Epsylene/caliban

EDUCATION

9/2024 - 6/2025	Master ID3D (Image, Développement et Technologies 3D) Second year of Master's degree in informatics, specializing in graphics engineering. Passed with honours.	University Claude Bernard Lyon 1 (France)
9/2023 - 6/2024	Master of Computational Physics (CompuPhys) Second year of Master's degree in physics, specializing in numerical physics. Passed with high honours.	University of Besançon (France)
9/2022 - 6/2023	Master of Physics (1st year) Enrolled in the complementary graduate program QMat and participated in the 2023 edition of the FPT (French Physicists' Tournament) .	University of Strasbourg (France)
9/2021 - 5/2022	Bachelor of Fundamental Physics Passed with high honours.	University of Strasbourg (France)
9/2019 - 5/2021	MPA (Mathématiques et Physique Approfondies) Math and physics double major. Passed with honours.	University of Strasbourg (France)

EXPERIENCE

3/2025 - 8/2025	M2 Internship Development and integration of a large-scale PBD grain solver BUF Compagnie
2/2024 - 8/2024	M2 Internship Benchmarking and development of a Kokkos-based HPC GPU diffusion solver CEA (Commissariat à l'Energie Atomique)
1/2023 - 4/2023	M1 Internship Lagrangian and Hamiltonian approaches of generalized catenoids ICS (Institut Charles Sadron)
2/2022 - 5/2022	L3 Internship The neutrino oscillation IPHC (Institut Pluridisciplinaire Hubert Curien)

LANGUAGES

English - C1 (TOIEC), French - native, Spanish - native
